This Score Card is valid up to 31st March 2027.

THE SCORE COMPUTATION

GATE 2024 score is calculated using the formula

$$\text{GATE Score} = S_c + (S_r - S_q) \frac{(M - M_q)}{(M_1 - M_q)}$$

where

S_r is the marks obtained by the candidate in the paper mentioned on the GATE 2024 Score Card

S_q is the qualifying marks for general category candidates in the paper

S_c is the mean of marks of top 0.1% or top 10 (whichever is larger) of all the candidates who appeared for the test paper

where

$M = 350$, is the score assigned to M_1

$M = 900$, is the score assigned to M_q

$\sigma = 25$ marks (out of 100) or $\mu + \sigma$, whichever is greater. Here, μ is the mean and σ is the standard deviation of

marks of all the candidates who appeared for the test paper.

Qualifying in GATE 2024 does not guarantee admission to a postgraduate program or scholarship/financial assistance. Admitting institutes may conduct additional tests or interviews for final selection of candidates.

PROBLEM STATEMENT

Many public transportation systems struggle to optimize their bus scheduling and routing, leading to increased wait times for passengers and decreased overall service quality and User Experience. We must be looking at redesigning public transport systems if we want to align with the evolving needs of commuters for enhanced accessibility and efficiency.

SOLUTION APPROACH

We have curated a solution to improve the efficiency and convenience of public bus transportation by collecting and processing real-time data from buses, which uses new-age technologies like **Artificial Intelligence, IoT and Machine Learning** that prioritize overall stakeholder experience.

Ensuring there is Feasibility, Utility, and Innovative touch to the solution, we came up with **PATHIK**, our application which makes use of **PTMS: Public Transport Management System**, an integrated web and mobile platform for users to book, track and board the public buses for admin to monitor, manage and schedule their fleet and for the drivers to navigate, transit and identify the optimal path.

PATHIK helps you track and monitor the crowd level on the bus you desire to board, hence eliminating **UNCERTAIN CROWDING ON PUBLIC TRANSPORT** , therefore enhancing the user experience.

We believed in enhancing the current infrastructure rather than starting from scratch, ensuring a seamless transition and maximizing cost effectiveness.

EXPECTED OUTCOME

- **Significant increase** in the number of people opting for public transport
- The digitalisation of Public Transportation in **cities like Ahmedabad**
- Real-Time Bus Tracking and Scheduling System catering to **all the stakeholders (Driver, Admin, General Passengers)**
- A robust platform (**web and mobile**) that integrates various technologies to provide accurate information and efficient management

- Improved air quality, and lower carbon emissions as a consequence of reduced traffic congestion within the city
- Seamless boarding and departure
- Instant feedback system
- Effective Cost Analysis
- Accessible ticketing system

PS35: This paper defines a perspective for short term electrical load forecasting using artificial neural network and fuzzy logic. To make these possible, various factors and environmental aspects are considered owing to have an electrical and economic forecast. Back Propagation algorithm have been proposed in Artificial Neural Network to obtain an efficient result for nonlinear data and also to minimize the error which is based on actual load and forecasted load. Fuzzy Logic Approach is proposed to predict the load using fuzzy inference system, fuzzy decision rules, defuzzification methods. Above mentioned approaches are applied to estimate the large load data using its own past experiences. The short-term load forecast is done for different load profiles. The load has prominent patterns. It includes Working days pattern from Monday-Friday load data, Weekends pattern Saturday and Sunday load data, Holiday pattern contains Public holiday load data, Peak Load data, Average Load data, Low load data. The data considered on hourly basis. The data is collected from the city called Panama from Panama district. The data contains date, hour of the day, Temperature of that hour, Relative Humidity of that hour, Precipitation of that hour, Load of that hour. The prediction accuracy is calculated using Mean Absolute Percentage Error (MAPE), Mean Absolute Deviation (MAD), Mean Square Error (MSE).

Keywords-*Artificial Neural Network(ANN), Back Propagation Algorithm(BP),Fuzzy Logic(FL), Fuzzy Inference System(FIS), Short term Load forecasting(STLF),Mean Absolute Percentage Error(MAPE),Mean Absolute Deviation(MAD),Mean Square Error(MSE).*
